Effective Date: September 2022

Physical Education: The primary purpose of physical education is to develop in young people an understanding of the positive impact an active lifestyle will have on their lives. The developmentally appropriate program also provides a unique learning environment where affective, psychomotor and cognitive skills can be developed. In addition, good health practices, sportsmanship, self-control, self-expression and the opportunity for positive social interaction with peers are fostered.

Health Education: The health education curriculum, written to the New Jersey Student Learning Standards, addresses various components of health education instruction that build from year to year. Each developmentally appropriate curricular unit includes interdisciplinary and technology connections to bridge learning in various content areas. While some of the skills are repeated at various grade levels, the content grows and addresses the students' needs at each level.

BOARD OF EDUCATION POLICY 2422: In accordance with the provisions of N.J.S.A. 18A:35-4.7, any student whose parent presents to the Principal a signed statement that any part of the instruction in health, family life education, or sex education is in conflict with his/her conscience or sincerely held moral or religious beliefs shall be excused from that portion of the course where such instruction is being given and no penalties as to credit or graduation shall result.
